

ASSINGMENT: DEVELOPMENT SET-UP DOCUMENTATION

OPERATING SYSTEM(WINDOWS OS)

These are the essentials required when installing windows operating system,

USB flash drive with at least 5GB free space, ensure the flash disk has nothing important since it will be formatted.

Technician PC - Windows PC that you'll use to format the USB flash drive.

Destination PC - A PC that you'll install Windows on.

FOLLOWED THE FOLLOWING STEPS :

STEP 1- Format the drive and set the primary partition as active.

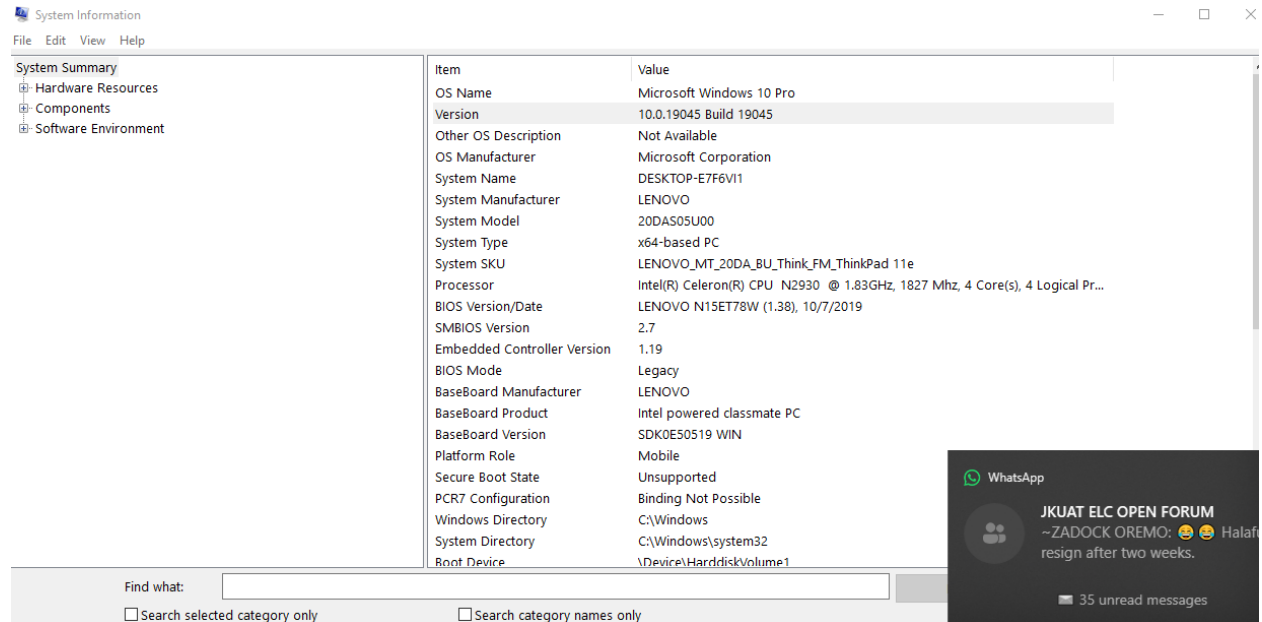

Connect the USB flash drive to your technician PC then Open Disk Management by Right-click on Start and choose Disk Management. Right-click the USB drive partition and choose Format. Select the FAT32 file system to be able to boot either BIOS-based or UEFI-based PCs. Set the partition as active: Right-click the USB drive partition and click Mark Partition as Active.

STEP2- Copy Windows Setup to the USB flash drive.

Use File Explorer to copy and paste the entire contents of the Windows product DVD or ISO to the USB flash drive.

STEP3- Install Windows to the new PC.

Connect the USB flash drive to a new PC. Turn on the PC and press the key that opens the boot-device selection menu for the computer, such as the Esc/F10/F12 keys. Select the option that boots the PC from the USB flash drive. Windows Setup starts. Follow the instructions to install.

The screenshot shows the Windows System Information window. The left sidebar has a tree view with 'System Summary' selected. The main area displays a table of system information. At the bottom, there is a search bar and two checkboxes: 'Search selected category only' and 'Search category names only'. A WhatsApp notification is visible in the bottom right corner.

Item	Value
OS Name	Microsoft Windows 10 Pro
Version	10.0.19045 Build 19045
Other OS Description	Not Available
OS Manufacturer	Microsoft Corporation
System Name	DESKTOP-E7F6V11
System Manufacturer	LENOVO
System Model	20DAS05U00
System Type	x64-based PC
System SKU	LENOVO_MT_20DA_BU_Think_FM_ThinkPad 11e
Processor	Intel(R) Celeron(R) CPU N2930 @ 1.83GHz, 1827 Mhz, 4 Core(s), 4 Logical Pr...
BIOS Version/Date	LENOVO N15ET78W (1.38), 10/7/2019
SMBIOS Version	2.7
Embedded Controller Version	1.19
BIOS Mode	Legacy
BaseBoard Manufacturer	LENOVO
BaseBoard Product	Intel powered classmate PC
BaseBoard Version	SDK0E50519 WIN
Platform Role	Mobile
Secure Boot State	Unsupported
PCR7 Configuration	Binding Not Possible
Windows Directory	C:\Windows
System Directory	C:\Windows\system32
Boot Device	\Device\Harddisk\Volume1

INSTALLING A TEXT EDITOR OR IDE(VS CODE)

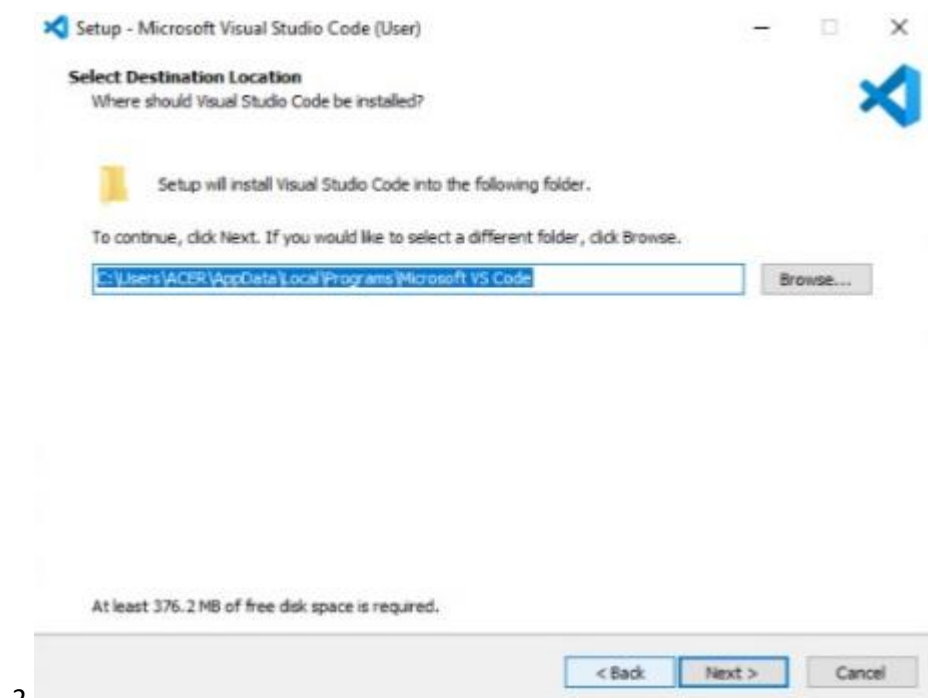

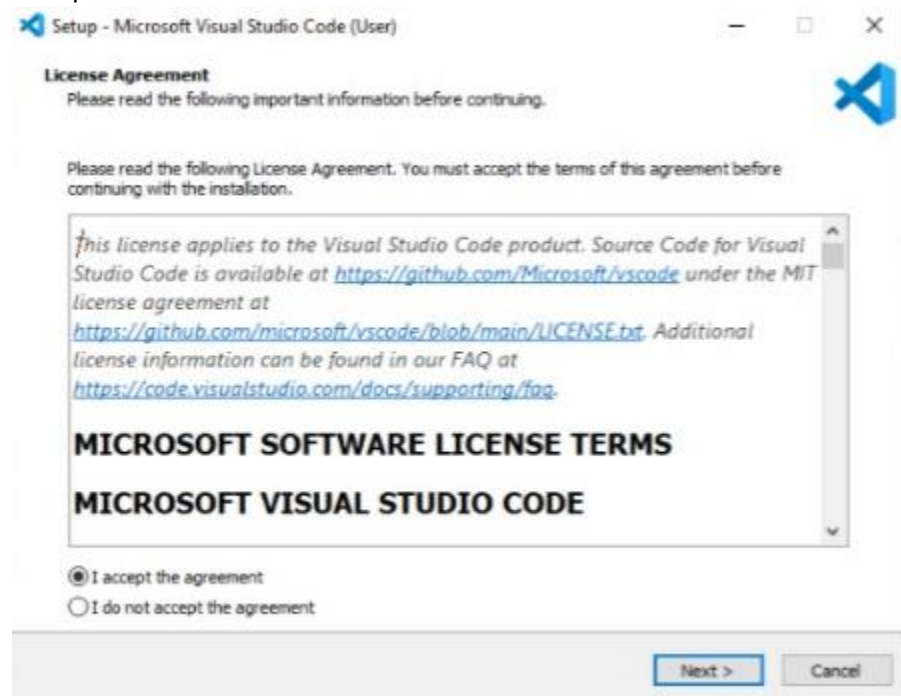

Downloaded vs code through this link (<https://code.visualstudio.com/Download>) and followed the following steps.

Chose preferable Operating System (Windows OS)

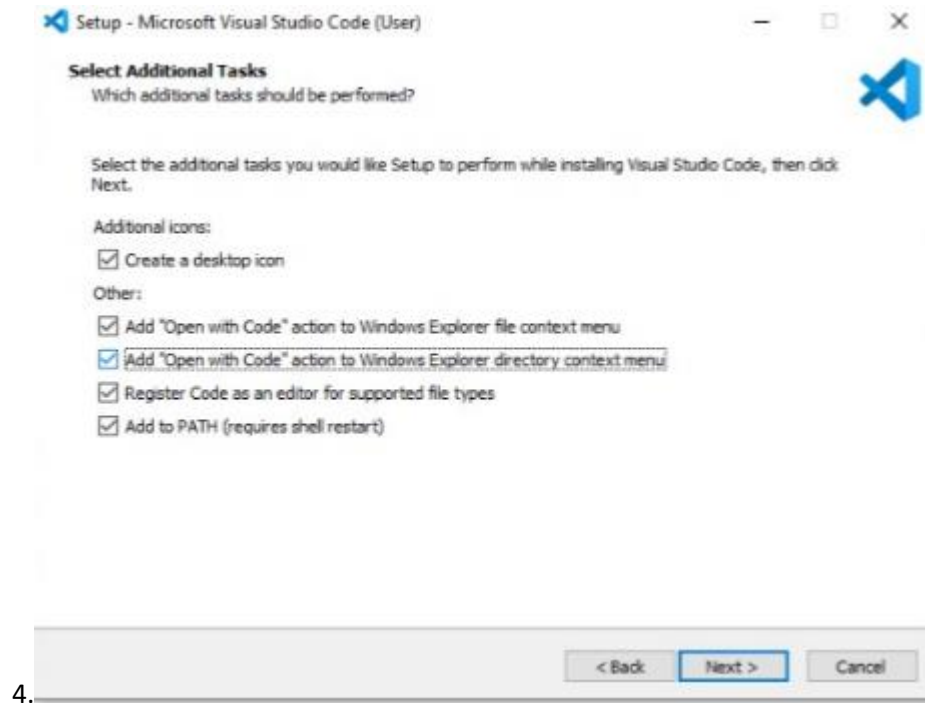

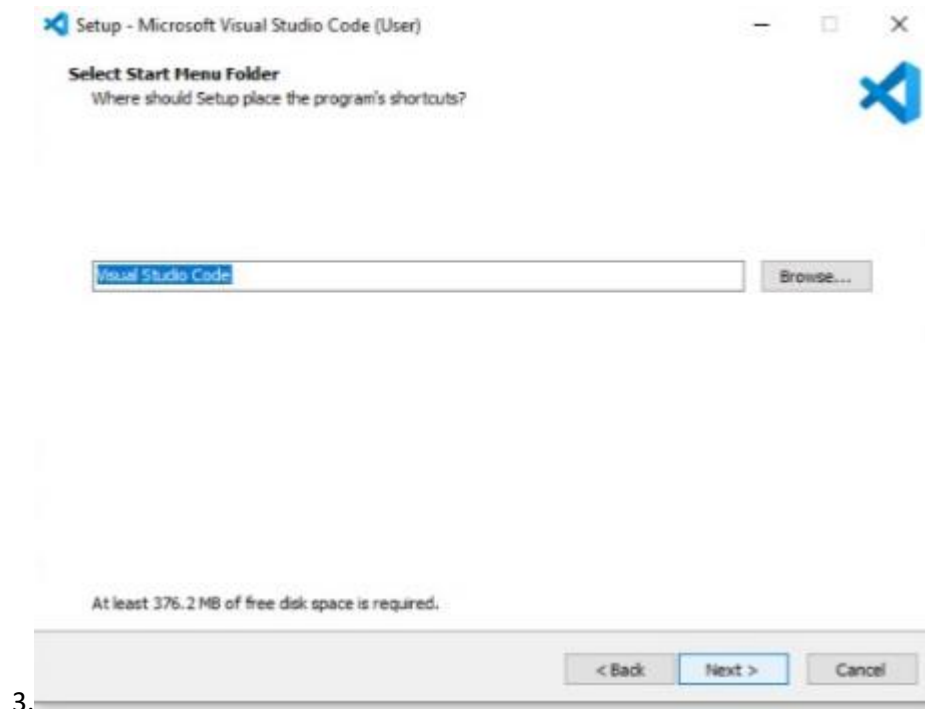

Downloaded vs code for windows

Chose location for vs code to be downloaded

Set up

2.

6.finish

SET UP VERSION CONTROL SYSTEM.

Download Git from its official website (download for windows) the latest version 64-bits

Follow instructions for set up

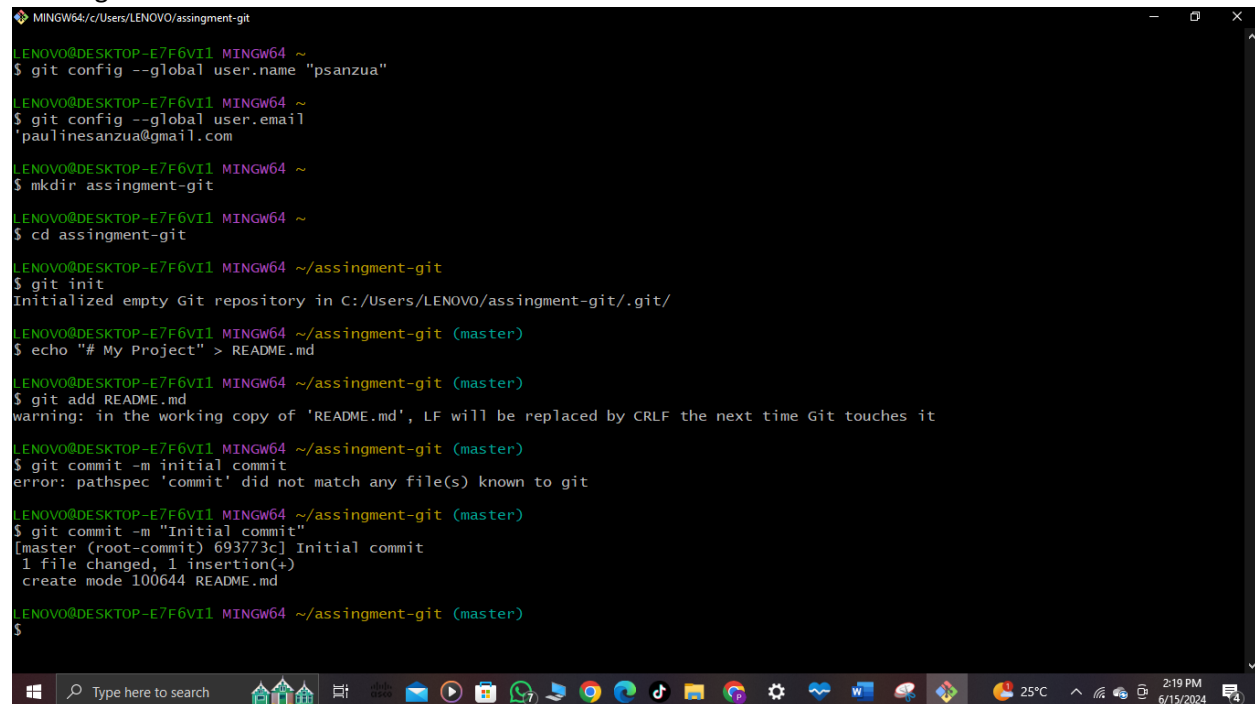

1. Read information and click next
2. Select destination and click next
3. Select components tick what you want to add preferable go with default
4. Click next choose default editor
5. Click next
6. Adjust the name of the initial branch (let git decide)
7. Adjusting path environment (default)
8. Click next up to the end and install

Configure Git by opening a terminal or command prompt and executing:

git config --global user.name "Your Name"

git config --global user.email your.email@example.com

creating an initial commit

```
MINGW64/c/Users/LENOVO/assingment-git
LENOVO@DESKTOP-E7F6VI1 MINGW64 ~
$ git config --global user.name "psanzua"
LENOVO@DESKTOP-E7F6VI1 MINGW64 ~
$ git config --global user.email 'paulinesanzua@gmail.com'
LENOVO@DESKTOP-E7F6VI1 MINGW64 ~
$ mkdir assingment-git
LENOVO@DESKTOP-E7F6VI1 MINGW64 ~
$ cd assingment-git
LENOVO@DESKTOP-E7F6VI1 MINGW64 ~/assingment-git
$ git init
Initialized empty Git repository in C:/Users/LENOVO/assingment-git/.git/
LENOVO@DESKTOP-E7F6VI1 MINGW64 ~/assingment-git (master)
$ echo "# My Project" > README.md
LENOVO@DESKTOP-E7F6VI1 MINGW64 ~/assingment-git (master)
$ git add README.md
warning: in the working copy of 'README.md', LF will be replaced by CRLF the next time Git touches it
LENOVO@DESKTOP-E7F6VI1 MINGW64 ~/assingment-git (master)
$ git commit -m initial commit
error: pathspec 'commit' did not match any file(s) known to git
LENOVO@DESKTOP-E7F6VI1 MINGW64 ~/assingment-git (master)
$ git commit -m "Initial commit"
[master (root-commit) 693773c] Initial commit
1 file changed, 1 insertion(+)
create mode 100644 README.md
LENOVO@DESKTOP-E7F6VI1 MINGW64 ~/assingment-git (master)

PROGRAMMING LANGUAGES AND RUNTIMES.

STEPS FOR PYTHON INSTALLATION.

To install python go to python official website

Download python for windows and choose the latest release

Navigate to where it has been downloaded double click to take you to the set up

Make sure to add to path then install.

To check the python version ,run in git bash the command python --version

PACKAGE MANAGERS (pip)

pip is included with Python 3.4 Version so to ensure you have it, run:

```
python -m ensurepip --upgrade
```

CONFIGURE DATABASE

Downloaded MYSQL through the link <https://dev.mysql.com/downloads/windows/installer/5.7.html>

followed the steps ,

click on MySQL community downloads at GA(click the one with more views)

click on “No thanks, just start my download.”

go to where it was downloaded and open it

Choose set-up type ,servers only and click on next.

Click next on path conflict

Click execute on installation and the mysql server will install.

Click next on product configuration

Click on the stand alone server

Tick on name pipe and shared memory on type and network, then click on advanced logging advance options then next.

Click next on name pipe

On Authentication method ,the ” use strong password” Should be ticked

Add password on account and roles and click on next

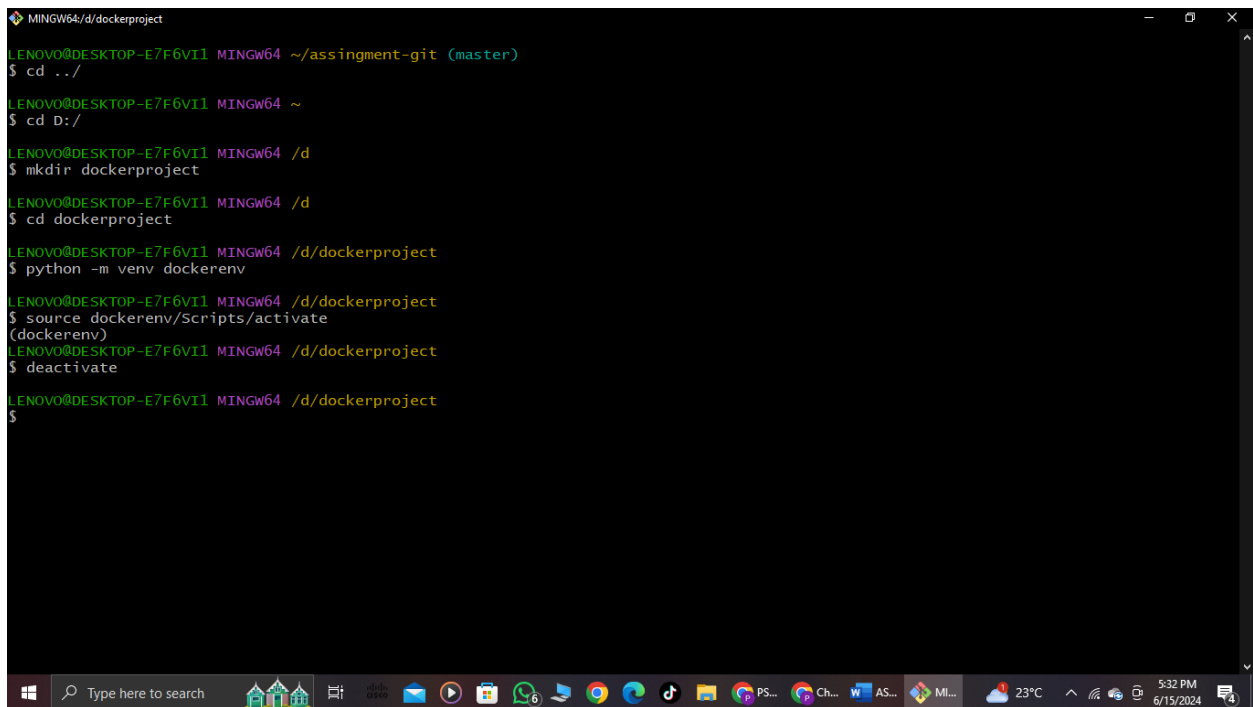

On window service,(use the default option) click next

Make sure the slow query and Binary long is ticked then click next
On Advance options, click next
Apply configuration and click execute
Finish.

SET UP VIRTUAL ENVIRONMENT

Navigate to project directory
Create a virtual environment
Activate virtual environment
Deactivate virtual environment.

```
MINGW64/d/dockerproject
LENOVO@DESKTOP-E7F6VI1 MINGW64 ~/assingment-git (master)
$ cd ../
LENOVO@DESKTOP-E7F6VI1 MINGW64 ~
$ cd D:/
LENOVO@DESKTOP-E7F6VI1 MINGW64 /d
$ mkdir dockerproject
LENOVO@DESKTOP-E7F6VI1 MINGW64 /d
$ cd dockerproject
LENOVO@DESKTOP-E7F6VI1 MINGW64 /d/dockerproject
$ python -m venv dockerenv
LENOVO@DESKTOP-E7F6VI1 MINGW64 /d/dockerproject
$ source dockerenv/Scripts/activate
(dockerenv)
LENOVO@DESKTOP-E7F6VI1 MINGW64 /d/dockerproject
$ deactivate
LENOVO@DESKTOP-E7F6VI1 MINGW64 /d/dockerproject
$
```

EXPLORE EXTENSIONS AND PLUGGINS STEPS.

Open Visual Studio Code.

Go to the Extensions view by clicking the Extensions icon in the Activity Bar on the side of the window or by pressing Ctrl+Shift+X.

Install useful extensions such as:

Python – search python and install it

GitLens

TROUBLESHOOTING:

During installation of python python did add to path automatically even after clicking on the add path icon so had to add path manually through this process:

Go to where python was installed

Navigate to the python folder.

Go to bin and the copy address.

Open the Start Search, type in "environment variable", and choose "Edit the system environment variables".

In the System Properties window, click on the "Environment Variables" button.

In the Environment Variables window, find the "Path" variable in the "System variables" section and click "Edit".

Click "New" and add the path to the Python executable

Click "OK" to close all windows.
